Art Unit: 3611

1. The following is an examiner's statement of reasons for allowance: The prior art references fail to teach the entire combination including a leaf spring where the entire intermediate portion contacts both the inner surface of the support and the outer peripheral surface of the bearing. Etsuro shows a leaf spring between a bearing and a support, but the intermediate portion only intermittently contacts either portion. There is no intermediate portion of the Etsuro spring that continuously contacts both the bearing and the support. Eda also shows a leaf spring in a similar environment, but the spring has one portion that contacts the support and a distal portion that contacts the outer periphery of the worm gear shaft. It does not teach a leaf spring with an intermediate portion that effectively fills the gap between the support and the bearing. Tsutsui shows a corrugated leaf spring between a bearing and support. Again, because it is wavy, the leaf spring intermediate portion does not continuously contact both the bearing and the support. Therefore, it fails to teach the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
